

MEDICAL CORE · INTEGRATED SOFTWARE

Surgical Navigation Systems

Registration results become a spatial experience users can understand and trust.

EVIDENCE STATE Ongoing	PERIOD 2023.07 - present
PORTFOLIO TIER Medical Core	PRIMARY CAPABILITY 3D Geometry & Registration

Connect tracking devices, SDKs, coordinate transforms, data flow, and HoloLens spatial presentation into one surgical-navigation experience.

Problem and system boundary

PROBLEM

When device coordinates and registration state stay fragmented, users cannot confidently interpret the spatial result.

Connect tracking devices, SDKs, coordinate transforms, data flow, and HoloLens spatial presentation into one surgical-navigation experience.

PUBLIC BOUNDARY

Actual phantom, equipment, and HoloLens demonstration media remains pending approval, and no clinical efficacy is claimed.

Joint review spans tracking hardware, medical imaging, XR, and workflow expertise.

EVIDENCE STATE

Ongoing / The actual integrated demonstration will be published only after approval.

Owned decisions and implementation

MY ROLE

Led the integrated software across device, SDK, coordinate transforms, and data flow, plus the HoloLens spatial-placement and registration-feedback experience.

SYSTEM RELATIONSHIP

Explanatory system relationship diagram; it is not photographic or experimental evidence.

IMPLEMENTATION TECHNOLOGIES

HoloLens 2 / Optical tracking / 3D Slicer / Unity / MRTK / OpenIGTLink

Verification and evidence ledger

REGISTERED PUBLIC EVIDENCE

VIDEO / PENDING PUBLIC APPROVAL

surgical-navigation-demo

Preferred working-system demonstration; no public derivative approved.

IMAGE / PENDING PUBLIC APPROVAL

surgical-navigation-demo-poster

Poster paired with the working-system clip; no public derivative approved.

VERIFICATION AND EVIDENCE LEDGER

Working device connections, coordinate transforms, spatial placement, and registration-feedback demonstrations provide the evidence.

Role, team result, and limits

MY ROLE

Led integrated software and HoloLens spatial placement and registration feedback.

Led the integrated software across device, SDK, coordinate transforms, and data flow, plus the HoloLens spatial-placement and registration-feedback experience.

TEAM RESULT

The team and external collaborators jointly conducted integration demonstrations and acceptance reviews; those results are not attributed

Working device connections, coordinate transforms, spatial placement, and registration-feedback demonstrations provide the evidence.

LIMITATIONS

Actual phantom, equipment, and HoloLens demonstration media remains pending approval, and no clinical efficacy is claimed.

The actual integrated demonstration will be published only after approval.

COLLABORATION BOUNDARY

Joint review spans tracking hardware, medical imaging, XR, and workflow expertise.

Connect tracking devices, SDKs, coordinate transforms, data flow, and HoloLens spatial presentation into one surgical-navigation experience.

Recap and joint-development invitation

Registration results become a spatial experience users can understand and trust.

PRIMARY CAPABILITY

3D Geometry & Registration / Medical Navigation & Visualization / XR Application Engineering

REGISTERED PUBLIC EVIDENCE

No external public link is currently registered.

WHAT TO BRING

Share the problem, data or sensors, target validation, and schedule. We can define coordinate and evidence boundaries together.

Joint review spans tracking hardware, medical imaging, XR, and workflow expertise.
